

# Project title

Develop an Alexa skill for covid-19 recommendation

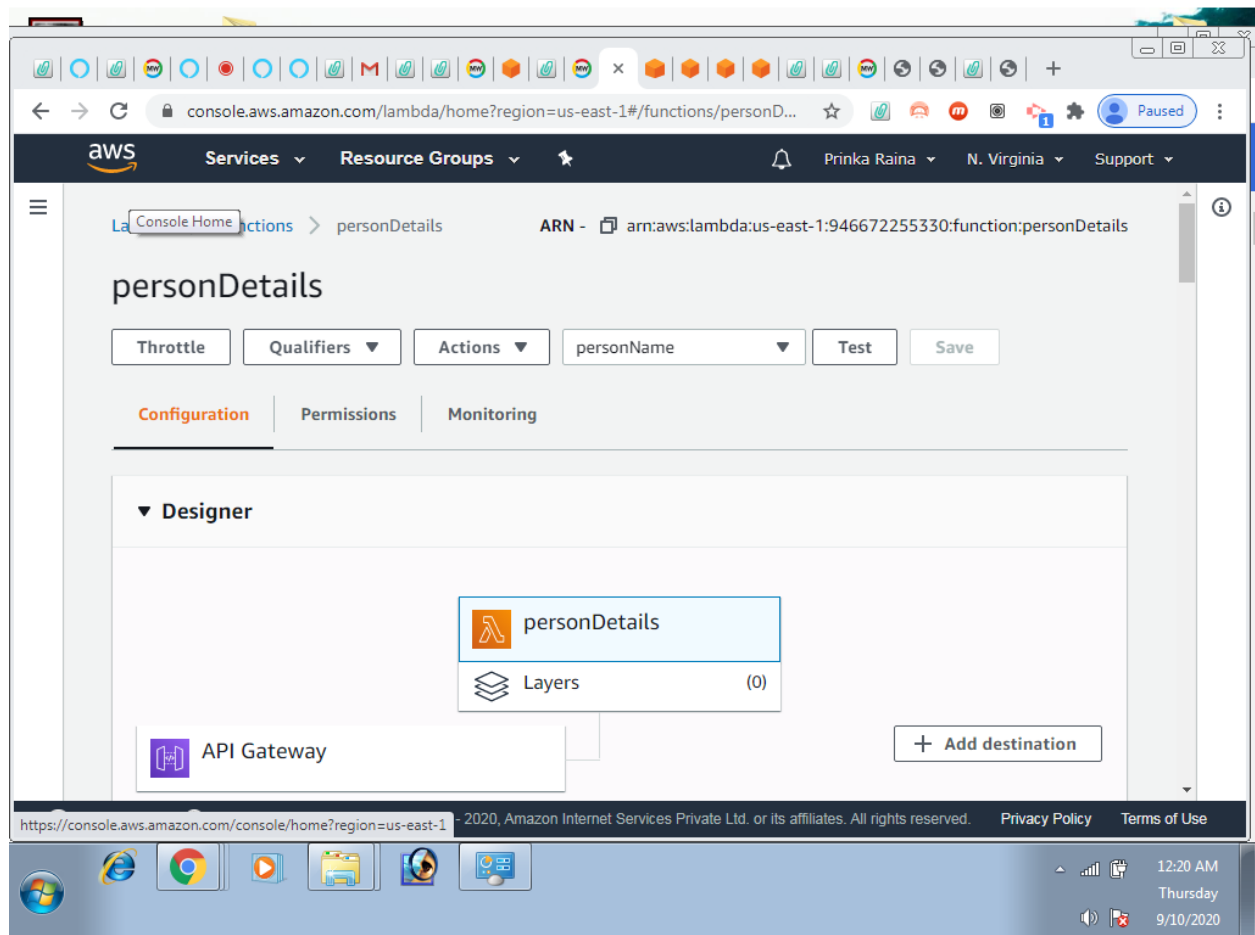

## Introduction

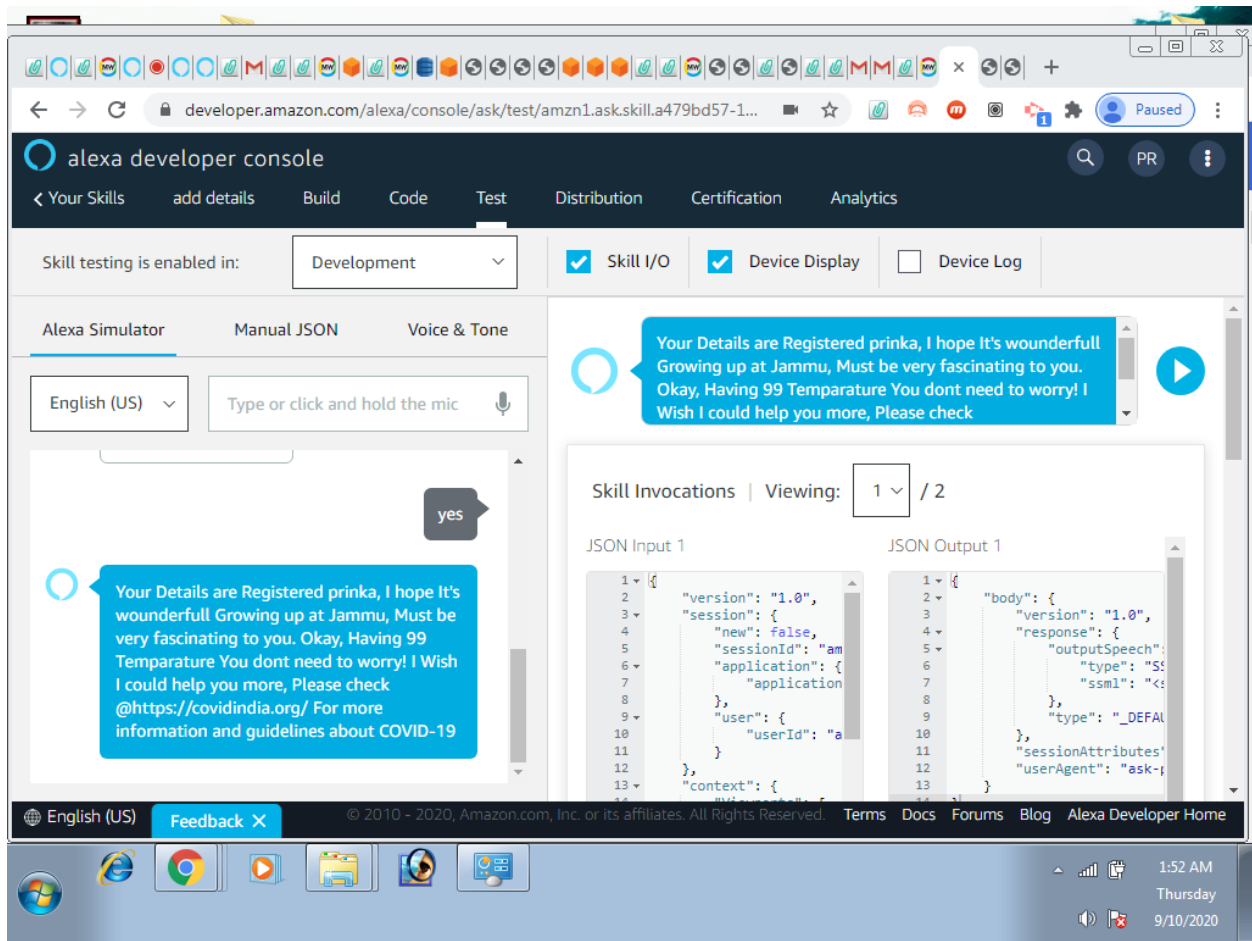

In this project we develop an Alexa which can ask queries such as “Alexa, what do I do if I think I have coronavirus?” or “Alexa, what do I do if I think I have COVID-19?” will prompt the voice assistant to ask about your symptoms, travel history, and possible exposure to the virus. It will then offer advice based on official Centers for Disease Control and Prevention information.

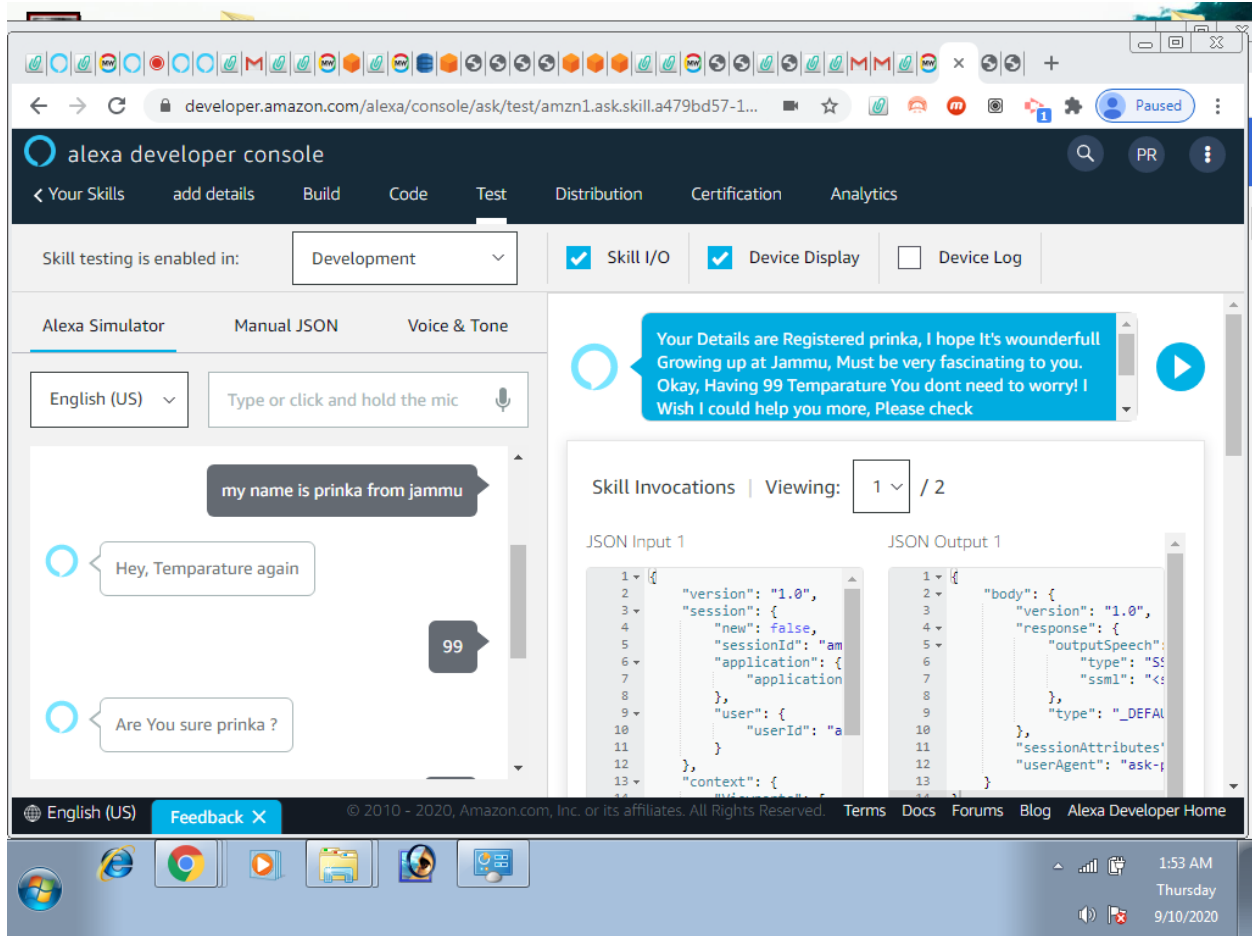

## Applications

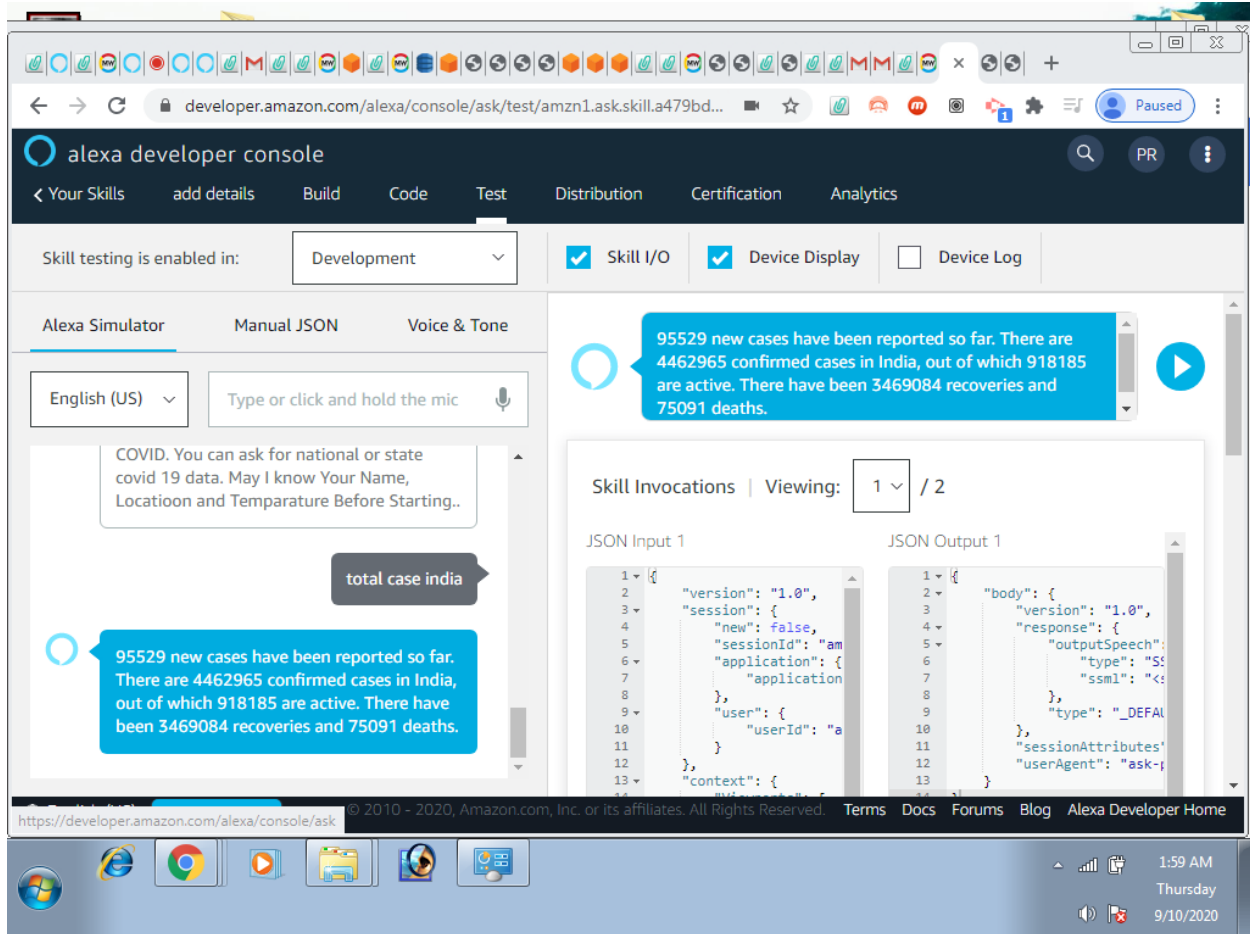

- Can be used to make informative decisions in this pandemic
- It gives us crystal clear precautions and warnings about our health
- It can give us an approximate analysis of the covid cases in the country

## Result

## Conclusions

This will be a very secure and reliable system, which will help us to keep us updated about the Covid-19 virus, which is spreading at a very high level. Moreover, this can also be upgraded to provide us more insights about our surroundings in this pandemic.

## Future Scope

- In future, it can be upgraded to a system which warns us when a covid patient is nearby
- It can also be customized to give us quick tips about our geographical location and the risks nearby.
